

Passage Practice Sheet

Supported Form: Latifur's Focus Writing

Part-01 [1-5]

1. Read the comprehension and answer the question:

6*5=30

Bangladesh has witnessed remarkable economic development over the years, and the role of banking has been instrumental in this progress. The banking sector in Bangladesh has played a crucial role in fostering economic growth, facilitating investment, and promoting financial inclusion. One of the key contributions of banks in Bangladesh is their role in mobilizing savings and channeling them towards productive investments. Through various deposit schemes and savings products, banks encourage individuals and businesses to save, which creates a pool of funds that can be used for investment purposes. These investments, in turn, stimulate economic activities, create employment opportunities, and contribute to overall economic development.

Moreover, banks act as financial intermediaries, connecting borrowers and lenders in the economy. By providing loans and credit facilities, banks enable entrepreneurs, small businesses, and large corporations to access the necessary capital for expansion, innovation, and infrastructure development. This access to finance fuels entrepreneurship, boosts industrial growth, and enhances productivity, thereby propelling the economic development of Bangladesh.

Additionally, the banking sector has played a vital role in promoting financial inclusion in the country. Through the establishment of branches in remote areas and the introduction of innovative banking services such as mobile banking and agent banking, banks have extended their reach to the unbanked population. This inclusion empowers individuals and businesses by providing them with access to formal financial services, enabling them to save, invest, and participate actively in economic activities.

The banking sector in Bangladesh has been a driving force behind the country's economic development. By mobilizing savings, providing access to finance, and promoting financial inclusion, banks have contributed significantly to the growth and prosperity of Bangladesh, creating a solid foundation for a sustainable and inclusive economy.

Questions & answers:

a.How has the banking sector in Bangladesh contributed to economic growth?

answer: The banking sector in Bangladesh has contributed to economic growth by mobilizing savings, channeling funds towards productive investments, and facilitating access to finance for businesses and entrepreneurs, leading to increased economic activities and development.

b.What role do banks play in promoting financial inclusion in Bangladesh?

Answer: Banks in Bangladesh have played a vital role in promoting financial inclusion by establishing branches in remote areas, introducing innovative banking services, such as mobile banking and agent banking, and providing access to formal financial services for the unbanked population.

c.How do banks in Bangladesh encourage savings?

Answer: Banks in Bangladesh encourage savings through various deposit schemes and savings products that incentivize individuals and businesses to save their money, creating a pool of funds that can be utilized for investment purposes.

d.What are the benefits of access to finance provided by banks in Bangladesh?

Answer: The access to finance provided by banks in Bangladesh benefits entrepreneurs, small businesses, and large corporations by enabling them to secure loans and credit facilities for expansion, innovation, and infrastructure development, thereby fueling entrepreneurship, boosting industrial growth, and enhancing productivity.

e.How does the banking sector in Bangladesh contribute to employment generation?

Answer: The banking sector in Bangladesh contributes to employment generation by facilitating investments that lead to the growth of industries and businesses, creating job opportunities and contributing to overall economic development and prosperity.

f.Give a suitable title of the passage?

Answer: "The Vital Role of Banking in Driving Economic Development in Bangladesh".

2. Read the comprehension and answer the question:**6*5=30**

Archaeological tourism in Bangladesh offers a captivating glimpse into the rich cultural heritage and historical legacy of the country. With a history spanning several millennia, Bangladesh is home to a wealth of archaeological treasures that attract visitors from around the world. From ancient Buddhist monasteries to majestic Islamic architecture, the country's archaeological sites offer a fascinating journey through time.

One of the prominent archaeological destinations in Bangladesh is the UNESCO World Heritage Site of Paharpur. Located in the northwest region of the country, Paharpur houses the impressive ruins of the Somapura Mahavihara, an ancient Buddhist monastery dating back to the 8th century. The site provides insights into the flourishing intellectual and religious traditions of the region during that era.

Another remarkable archaeological site is the Lalbagh Fort, located in the heart of Dhaka, the capital city of Bangladesh. Built in the 17th century, this Mughal fortress showcases stunning architectural features, including intricately designed gateways, audience halls, and a mosque. Exploring the fort allows visitors to immerse themselves in the historical ambiance of the Mughal era.

The ancient city of Mainamati is yet another significant archaeological site in Bangladesh. Situated in the southeastern region, Mainamati is renowned for its collection of Buddhist ruins, including stupas, monasteries, and temples. The site offers a glimpse into the rich Buddhist heritage and the influence of ancient civilizations that once thrived in the area.

Archaeological tourism in Bangladesh not only provides an opportunity to appreciate the architectural marvels of the past but also offers a deeper understanding of the country's cultural roots. Visitors can explore archaeological museums that house an array of artifacts and relics unearthed from various sites, shedding light on the historical and cultural significance of Bangladesh.

Archaeological tourism in Bangladesh presents a captivating experience for enthusiasts seeking to unravel the country's rich past. The archaeological sites, ranging from ancient Buddhist monasteries to Mughal fortresses, provide a fascinating window into the historical and cultural tapestry of Bangladesh, allowing visitors to witness the remnants of ancient civilizations and appreciate the diverse heritage of the country.

Questions & Answers:

a) What is one notable UNESCO World Heritage Site in Bangladesh?

Answer: Paharpur, a UNESCO World Heritage Site in Bangladesh, features the ruins of Somapura Mahavihara, an ancient Buddhist monastery dating back to the 8th century. It offers insights into the intellectual and religious traditions of the region during that time.

b) Where is the Lalbagh Fort located, and what is its historical significance?

Answer: The Lalbagh Fort is situated in Dhaka, the capital city of Bangladesh. Built in the 17th century, it showcases impressive Mughal architecture and provides visitors with a glimpse into the rich history of the Mughal era in the region.

c) Which region in Bangladesh is known for the ancient city of Mainamati?

Answer: The ancient city of Mainamati is located in the southeastern region of Bangladesh. It is renowned for its Buddhist ruins, including stupas, monasteries, and temples, offering a glimpse into the country's Buddhist heritage and the civilizations that once thrived there.

d) How does archaeological tourism contribute to understanding Bangladesh's cultural roots?

Answer: Through archaeological tourism, visitors can explore museums that house artifacts and relics from various sites, providing insights into the historical and cultural significance of Bangladesh. This deepens the understanding of the country's cultural roots and the influence of ancient civilizations.

e) What can visitors expect to discover at Paharpur, Lalbagh Fort, and Mainamati?

Answer: Visitors to Paharpur can explore the ruins of an ancient Buddhist monastery, while Lalbagh Fort offers a chance to experience Mughal architecture and Mainamati showcases Buddhist ruins. These sites collectively offer a journey through time and a glimpse into Bangladesh's diverse historical heritage.

f) What is the significance of the ancient city of Mainamati in Bangladesh?

Answer: The ancient city of Mainamati holds great importance as it represents the historical influence of Buddhism and the existence of ancient civilizations in the region. Its collection of Buddhist ruins provides valuable insights into the cultural and religious practices of the past.

3. Read the comprehension and answer the question:**6*5=30**

The Sundarbans, located in Bangladesh, is a unique and invaluable natural treasure that holds immense importance for both the country and the world. This vast mangrove forest, spanning over 10,000 square kilometers, serves as a vital ecosystem and plays a crucial role in various aspects of Bangladesh's environment, economy, and cultural heritage.

First and foremost, the Sundarbans is renowned for its rich biodiversity. It is home to an array of plant and animal species, including the majestic Bengal tiger, which is one of the most iconic and endangered species on the planet. The mangrove forests act as a natural barrier, protecting the coastal regions from erosion, storms, and tidal surges. Moreover, the Sundarbans is a significant carbon sink, absorbing and storing large amounts of carbon dioxide, thus helping to mitigate the effects of climate change.

Beyond its ecological significance, the Sundarbans holds great economic value for Bangladesh. The mangrove forests support a thriving fishing industry, providing livelihoods for thousands of coastal communities. The forests also serve as a source of timber and non-timber forest products, contributing to the local economy and providing employment opportunities. Furthermore, the Sundarbans is a popular tourist destination, attracting visitors from around the world. Its unique ecosystem, wildlife, and scenic beauty offer a remarkable experience for nature enthusiasts and researchers alike. Tourism in the Sundarbans not only generates revenue but also raises awareness about the importance of conservation and environmental preservation.

Preserving the Sundarbans is of utmost importance for Bangladesh and the global community. Efforts to protect this fragile ecosystem involve measures such as wildlife conservation, sustainable forest management, and community-based initiatives. It requires a collaborative approach involving government agencies, local communities, and international organizations to ensure the long-term conservation and sustainable use of this invaluable natural resource.

In conclusion, the Sundarbans in Bangladesh holds tremendous significance due to its ecological, economic, and cultural importance. Recognizing and safeguarding this unique mangrove forest is essential for maintaining biodiversity, protecting coastal regions, supporting livelihoods, and promoting sustainable tourism. It serves as a reminder of the intricate connection between nature and human well-being, emphasizing the need for responsible environmental stewardship.

Questions & answers:

a) What is the primary role of the Sundarbans in protecting coastal regions?

Ans.: The Sundarbans serves as a natural barrier against erosion, storms, and tidal surges along Bangladesh's coastal areas. Its dense mangrove forests act as a buffer, absorbing the impact of waves and reducing the vulnerability of coastal communities to natural disasters. This ecosystem plays a vital role in safeguarding the coastlines and preserving the integrity of the surrounding regions.

b) How does the Sundarbans contribute to mitigating climate change?

Ans.: The Sundarbans acts as a significant carbon sink, absorbing and storing large amounts of carbon dioxide. The dense mangrove vegetation helps to sequester carbon, reducing greenhouse gas emissions and combating climate change. By preserving the Sundarbans, Bangladesh contributes to global efforts in mitigating the adverse effects of climate change and maintaining the delicate balance of the planet's ecosystems.

c) What are some economic benefits associated with the Sundarbans?

Ans.: The Sundarbans supports a thriving fishing industry, providing livelihoods for coastal communities. The rich biodiversity of the mangrove forests sustains abundant fish populations, ensuring a steady source of income for local fishermen. Additionally, the Sundarbans serves as a source of timber and non-timber forest products, contributing to the local economy and providing employment opportunities for the communities residing in and around the forest.

d) How does tourism contribute to the preservation of the Sundarbans?

Ans.: Tourism in the Sundarbans generates revenue that can be utilized for conservation efforts and environmental protection initiatives. The income generated from tourism activities can be invested in enhancing surveillance and anti-poaching measures, raising awareness about the importance of conservation, and supporting local communities dependent on the forest. Furthermore, responsible tourism practices encourage visitors to appreciate the natural beauty of the Sundarbans and instill a sense of stewardship towards its preservation.

e) What collaborative efforts are necessary for the conservation of the Sundarbans?

Ans.: Conserving the Sundarbans requires collaboration among various stakeholders, including government agencies, local communities, and international organizations. Governments need to enforce wildlife conservation laws, establish protected areas, and implement sustainable forest management practices. Local communities can actively participate

in conservation efforts through community-based initiatives, such as ecotourism and forest restoration projects.

f) Why is the preservation of the Sundarbans crucial for Bangladesh and the global community?

Ans.: The Sundarbans holds immense ecological, economic, and cultural importance. Its preservation ensures the protection of biodiversity, which is essential for maintaining ecosystem balance and resilience. Economically, the Sundarbans sustains livelihoods through fishing and forest-based industries. Moreover, its global significance lies in the role it plays as a natural carbon sink, contributing to climate change mitigation efforts.

4. Read the comprehension and answer the questions:

6*5=30

Bangladesh's blue economy holds immense potential for sustainable development, leveraging its vast maritime resources and coastal ecosystems. Situated at the crossroads of the Bay of Bengal, the country is endowed with a 710-kilometer coastline and an extensive network of rivers, estuaries, and the world's largest mangrove forest, the Sundarbans.

The marine sector in Bangladesh plays a vital role in the national economy, contributing significantly to fisheries, aquaculture, and maritime trade. The country is among the top producers of fish globally and the world's fifth-largest aquaculture producer, ensuring food security and providing livelihoods for millions of people, particularly in the coastal regions. With a growing focus on sustainability, Bangladesh is making strides in managing its marine resources responsibly. Initiatives to combat overfishing, implement conservation measures, and promote sustainable aquaculture practices are being undertaken to safeguard the marine ecosystems and support the livelihoods of coastal communities. Integrated coastal zone management and mangrove restoration projects are being carried out to protect against natural disasters, such as cyclones and rising sea levels.

The country is exploring opportunities in maritime trade and transportation, establishing deeper sea ports like the Payra Port, Chittagong Port, and Mongla Port, and enhancing connectivity with regional and global partners. This positions Bangladesh as a strategic player in the Indian Ocean's maritime trade network, opening doors for increased economic cooperation, foreign investment, and regional connectivity through initiatives like the Bay of Bengal Industrial Growth Belt.

Bangladesh's blue economy extends to harnessing renewable energy from the ocean, such as tidal and wave energy. By capitalizing on its unique geographical location, the nation aims to tap into these green energy sources, contributing to

its ambitious climate change mitigation goals. This includes the construction of a floating solar power plant and initiatives to promote energy efficiency and conservation. Bangladesh's blue economy presents a promising avenue for sustainable growth and development, emphasizing responsible resource management, fostering economic prosperity, and safeguarding the marine environment for future generations. With a comprehensive approach to harnessing its marine potential, Bangladesh is poised to emerge as a dynamic player in the regional and global maritime arena while ensuring the well-being of its coastal communities and the preservation of its invaluable marine ecosystems.

Questions & answers:

a) What is the length of Bangladesh's coastline, and what unique natural feature does it possess?

Answer: Bangladesh has a 710-kilometer long coastline. One of the significant natural features it possesses is the Sundarbans, which is the world's largest mangrove forest. This unique ecosystem serves as a vital habitat for various wildlife species and acts as a natural barrier against coastal erosion and natural disasters like cyclones.

b) How does the marine sector contribute to Bangladesh's economy?

Answer: The marine sector plays a crucial role in Bangladesh's economy by significantly contributing to fisheries, aquaculture, and maritime trade. The country is among the top global producers of fish and the world's fifth-largest producer of aquaculture products. This sector ensures food security and provides livelihoods for millions of people, particularly those residing in coastal regions.

c) What initiatives is Bangladesh undertaking to promote sustainability in its marine resources?

Answer: To promote sustainability, Bangladesh is combatting overfishing through stricter regulations and enforcement measures. It is also implementing conservation measures and adopting responsible aquaculture practices. Moreover, the country is engaged in integrated coastal zone management and mangrove restoration projects to protect coastal communities from natural disasters and preserve marine ecosystems.

d) How is Bangladesh positioning itself as a strategic player in the maritime trade network?

Answer: Bangladesh is establishing deeper sea ports like Payra Port, Chittagong Port, and Mongla Port to enhance its maritime trade capabilities. By improving connectivity with regional and global partners, the country is opening doors for increased economic cooperation, foreign investment, and regional connectivity through initiatives like the Bay of Bengal Industrial Growth Belt.

e) What renewable energy sources is Bangladesh harnessing from the ocean?

Answer: Bangladesh is capitalizing on its unique geographical location to tap into renewable energy sources from the ocean, such as tidal and wave energy. By investing in these green energy alternatives, the nation aims to contribute to its ambitious climate change mitigation goals and reduce reliance on traditional fossil fuels.

f) What measures is Bangladesh taking to protect its coastal communities and marine environment from natural disasters?

Answer: Bangladesh is engaged in integrated coastal zone management projects, which involve planning and implementing measures to protect coastal communities from the impacts of cyclones and rising sea levels. Additionally, mangrove restoration initiatives, especially in the Sundarbans, act as a natural barrier against coastal erosion and mitigate the effects of natural disasters on marine ecosystems and biodiversity.

5. Read the comprehension and answer the questions: 6*5=30

Bangladesh, a country located in South Asia, boasts a rich tapestry of cultural diversity that weaves together a multitude of traditions, customs, and ethnicities. Within its borders, a harmonious blend of Bengali, indigenous, and immigrant cultures coexist, creating a vibrant and unique societal fabric. At the core of Bangladesh's cultural diversity is the Bengali culture, which forms the bedrock of the nation's identity. The Bengali language, literature, music, and arts flourish, shaping the cultural landscape. Traditional festivals like Pohela Boishakh and Durga Puja are celebrated with great fervor, fostering a sense of unity and communal harmony. In addition to the Bengali culture, Bangladesh is home to numerous indigenous communities, each with its distinct traditions and way of life. From the colorful festivals of the Chakmas to the intricate crafts of the Garos, these communities proudly preserve their unique heritage, adding to the cultural mosaic of the nation.

Moreover, Bangladesh has embraced diverse immigrant communities over the years, including descendants of Arab, Persian, and Turkish settlers, as well as smaller groups of Europeans and Chinese. These communities have infused their customs, cuisine, and languages into the country's social fabric, creating a beautiful blend of influences. The cultural diversity of Bangladesh extends beyond traditional practices to include contemporary arts, literature, and entertainment. The country's film industry, popularly known as "Dhallywood," produces a wide array of movies, while literature flourishes in both Bengali and English languages, reflecting the diverse perspectives and voices of the nation.

In conclusion, Bangladesh's cultural diversity is a source of pride and vitality. The interplay of Bengali, indigenous, and immigrant cultures manifests in its languages, arts, festivals, and everyday life, making it a treasure trove of traditions and a testament to the nation's inclusive spirit.

Questions & answers:

a) How does the presence of indigenous communities enhance the cultural diversity of Bangladesh?

Answer: The presence of indigenous communities enhances the cultural diversity of Bangladesh by bringing their distinct traditions and way of life. Each indigenous community has its own festivals, crafts, and cultural practices that contribute to the overall cultural mosaic of the nation.

b) What role have immigrant communities played in shaping the cultural landscape of Bangladesh?

Answer: Immigrant communities have played a significant role in shaping the cultural landscape of Bangladesh. Descendants of Arab, Persian, Turkish settlers, as well as smaller groups of Europeans and Chinese, have brought their customs, cuisine, and languages, adding to the diverse cultural tapestry of the country.

c) How does the film industry in Bangladesh contribute to the country's cultural diversity?

Answer: The film industry in Bangladesh, known as "Dhallywood," contributes to the country's cultural diversity by producing a wide array of movies that showcase different aspects of Bengali culture and contemporary issues.

d) In what languages is literature produced in Bangladesh, and what does it reflect?

Answer: Literature in Bangladesh is produced in both Bengali and English languages. It reflects the diverse perspectives and voices of the nation, encompassing traditional literary works, modern literature, and works of Bangladeshi authors writing in English.

e) Why is the cultural diversity of Bangladesh considered a source of pride for the nation?

Answer: The cultural diversity of Bangladesh is considered a source of pride for the nation because it represents the inclusivity and acceptance of various cultures, traditions, and communities within its borders. It showcases the country's vibrant and harmonious coexistence of different cultural identities.

f) Write down a suitable title of the given passage?

Answer: Title: "Embracing Diversity: The Cultural Tapestry of Bangladesh"

Part-2 [6—10]

6. Read the comprehension and answer the questions:

6*5=30

Default loans have been a persistent challenge for Bangladesh's financial sector. These loans refer to the failure of borrowers to repay their debts as per the agreed terms. In recent years, Bangladesh has faced a significant burden of default loans, which has adversely affected the stability of the banking industry.

The high rate of default loans in Bangladesh can be attributed to various factors. Weak corporate governance practices, inadequate credit risk assessment, and poor loan monitoring mechanisms have played a role in the accumulation of default loans. Additionally, economic factors such as political instability, fluctuations in global commodity prices, and natural disasters have further contributed to the problem.

The impact of default loans on the economy of Bangladesh is far-reaching. It hampers the overall lending capacity of banks, restricting their ability to provide credit for productive purposes. This, in turn, impedes investment and hinders economic growth. Furthermore, default loans strain the financial stability of banks, leading to a loss of depositor confidence and potential systemic risks.

Addressing the issue of default loans is crucial for Bangladesh's financial sector and overall economic development. The government and regulatory authorities have implemented various measures, including strengthening loan recovery mechanisms, enhancing risk management practices, and promoting good governance in banks. Efforts are also being made to promote financial literacy and improve borrowers' understanding of loan responsibilities.

By tackling the root causes of default loans and implementing effective remedial measures, Bangladesh aims to reduce the burden of non-performing loans, restore the stability of its banking sector, and foster sustainable economic growth for the benefit of its people.

Questions & answers:

a) What are some factors contributing to the high rate of default loans in Bangladesh?

Answer: Factors contributing to the high rate of default loans in Bangladesh include weak corporate governance practices, inadequate credit risk assessment, poor loan monitoring mechanisms, as well as economic factors such as political instability, fluctuations in global commodity prices, and natural disasters.

b) How do default loans impact the economy of Bangladesh?

Answer: Default loans have a detrimental impact on Bangladesh's economy. They restrict banks' lending capacity, hindering credit availability for productive purposes. This, in turn, impedes investment and slows down overall economic growth. Additionally, default loans strain the financial stability of banks, leading to a loss of depositor confidence and potential systemic risks.

c) What measures have been taken to address the issue of default loans in Bangladesh?

Answer: To address the issue of default loans, the government and regulatory authorities in Bangladesh have implemented measures such as strengthening loan recovery mechanisms, enhancing risk management practices, and promoting good governance in banks. Efforts are also being made to improve financial literacy among borrowers, enabling them to better understand their loan responsibilities.

d) What is the significance of reducing the burden of non-performing loans in Bangladesh?

Answer: Reducing the burden of non-performing loans is significant for Bangladesh as it helps restore the stability of the banking sector. By doing so, it improves the overall health of financial institutions, boosts depositor confidence, and minimizes the potential risks of a financial crisis. It also creates a conducive environment for sustainable economic growth and development.

e) How do default loans affect the lending capacity of banks?

Answer: Default loans restrict the lending capacity of banks by tying up funds that could otherwise be used for new loans. When borrowers fail to repay their debts, banks face a shortage of available capital to extend credit to new borrowers or invest in productive sectors. This limitation hampers economic activities and impedes the flow of credit throughout the economy.

f) What role does good governance play in mitigating the issue of default loans?

Answer: Good governance practices in banks play a crucial role in mitigating the issue of default loans. It ensures transparency, accountability, and effective risk management, reducing the likelihood of loans turning into non-performing assets. With proper governance frameworks in place, banks can make informed lending decisions, enforce loan contracts, and proactively manage credit risks, thus minimizing the occurrence of default loans.

7. Read the comprehension and answer the questions:**6*5=30**

Bangladesh, often referred to as the "land of rivers," boasts a remarkable tapestry of waterways, making it one of the most riverine countries in the world. The three major rivers in Bangladesh are the Padma (known as the Ganges in India), the Jamuna (Brahmaputra), and the Meghna. Originating from the Himalayas, these rivers traverse thousands of kilometers before converging in Bangladesh's vast delta region, ultimately emptying into the Bay of Bengal. Their waters feed into a complex system of tributaries and distributaries that weave through the country, creating a fertile and productive ecosystem.

The rivers of Bangladesh are the lifeblood of its society, playing a vital role in its economic, social, and cultural aspects. One of the most significant contributions of these rivers is their role in transportation. Water transport remains a cost-effective and efficient means of moving goods and people across the country, particularly in the regions where road infrastructure is limited. Moreover, the fertile silt carried by these rivers enriches the plains, making them highly suitable for agriculture. Bangladesh's agriculture heavily relies on this natural irrigation system, supporting the cultivation of rice, jute, and various other crops that form the backbone of its economy.

However, the riverine charm of Bangladesh also presents challenges. The country is susceptible to annual flooding during the monsoon season. While this natural phenomenon rejuvenates the soil, it also causes havoc, displacing communities, damaging crops, and threatening lives and properties.

In response, the government and various organizations are working to manage water resources more effectively. Initiatives include embankment construction, river dredging, and water diversion projects to mitigate the impact of floods and protect vulnerable areas. Preserving the ecological balance of the rivers is also a growing concern. Industrial pollution, untreated sewage, and deforestation in the upstream regions pose environmental threats. Encouragingly, efforts are underway to promote awareness and sustainable practices to protect the precious riverine ecosystem.

The rivers of Bangladesh are not mere watercourses; they are the essence of the nation's identity and the backbone of its civilization. The interwoven beauty and complexity of these waterways have nurtured and sustained the people of Bangladesh for centuries, connecting them to their past, anchoring them in the present, and flowing towards a shared future.

Questions & answers:

a) What are the three major rivers in Bangladesh, and where do they originate?

Answer: The three major rivers in Bangladesh are the Padma (Ganges), the Jamuna (Brahmaputra), and the Meghna. They originate from the Himalayas and traverse thousands of kilometers before converging in the vast delta region of Bangladesh and emptying into the Bay of Bengal.

b) How do the rivers contribute to Bangladesh's agriculture and economy?

Answer: The fertile silt carried by these rivers enriches the plains, making them highly suitable for agriculture. Bangladesh's agriculture heavily relies on this natural irrigation system, supporting the cultivation of rice, jute, and various other crops that form the backbone of its economy.

c) What is the primary mode of transportation in Bangladesh, and why is it preferred in certain regions?

Answer: Water transport is the primary mode of transportation in Bangladesh. It is cost-effective and efficient, particularly in regions where road infrastructure is limited. The extensive network of rivers and waterways makes it easier for goods and people to move across the country through boats and ferries.

d) What challenges does Bangladesh face due to its riverine landscape during the monsoon season?

Answer: Bangladesh is susceptible to annual flooding during the monsoon season. While these floods rejuvenate the soil, they also cause havoc by displacing communities, damaging crops, and threatening lives and properties.

e) How do industrial pollution and untreated sewage pose environmental threats to the rivers?

Answer: Industrial pollution and untreated sewage from upstream regions contribute to water pollution in the rivers. This pollution can harm aquatic life and degrade the overall health of the riverine ecosystem, affecting the livelihoods of community's dependent on fishing and agriculture.

f) What are some of the measures taken by the government and organizations to address the challenges posed by the river floods?

Answer: The government and various organizations in Bangladesh are implementing initiatives such as embankment construction, river dredging, and water diversion projects to mitigate the impact of floods and protect vulnerable areas. These measures aim to reduce the damage caused by floods and create a more resilient and flood-resistant environment for communities living along the riverbanks.

8. Read the comprehension and answer the questions:**6*5=30**

The present world order is characterized by a complex and dynamic global landscape, shaped by various political, economic, and technological forces. The traditional power structures that once dominated the international system have undergone significant shifts, giving rise to new challenges and opportunities.

In the political realm, there has been a shift from a unipolar world dominated by a single superpower to a more multipolar order, with several countries asserting their influence on the global stage. This has led to increased geopolitical tensions and competition for resources and influence.

Economically, globalization has interconnected economies more than ever before, fostering an interdependent global market. However, this has also led to issues such as income inequality, trade imbalances, and the concentration of power in multinational corporations.

Technological advancements have played a transformative role in shaping the current world order. The rise of the digital age has facilitated instant communication and the flow of information, but it has also brought about cybersecurity threats and privacy concerns.

Challenges like climate change, terrorism, and pandemics require collective global responses, emphasizing the need for international cooperation and multilateral institutions.

The present world order is characterized by both interconnectivity and fragmentation, presenting a delicate balance between shared interests and competing agendas. Navigating this complex landscape will demand diplomatic skill, innovative solutions, and a commitment to addressing the pressing global challenges collaboratively.

Questions & answers:**a) How would you describe the current world order?**

Answer: The current world order is characterized by a complex and dynamic global landscape, with multiple political, economic, and technological forces at play. It has shifted from a unipolar system to a more multipolar arrangement, with several countries asserting their influence.

b) What has been the impact of globalization on the world economy?

Answer: Globalization has interconnected economies more than ever before, creating an interdependent global market. However, it has also led to challenges such as income inequality, trade imbalances, and the concentration of power in multinational corporations.

c) How have technological advancements influenced the present world order?

Answer: Technological advancements, especially in the digital age, have transformed the world order by facilitating instant communication and the flow of information. However, they have also brought about cybersecurity threats and concerns over privacy.

d) What are some of the challenges that the current world order faces?

Answer: Some of the challenges include geopolitical tensions, competition for resources and influence, climate change, terrorism, and pandemics. These issues demand collective global responses and underline the importance of international cooperation.

e) How has the political landscape changed in the current world order?

Answer: The political landscape has shifted from a unipolar system dominated by a single superpower to a more multipolar order, where several countries wield influence on the global stage, leading to increased geopolitical tensions and competition.

f) What qualities will be crucial in navigating the complex world order?

Answer: Navigating the complex world order will require diplomatic skill, innovative problem-solving, and a commitment to addressing global challenges collaboratively through international cooperation and multilateral institutions.

9. Read the comprehension and answer the question:

6*5=30

Smart Bangladesh is a vision for the future of the country that is driven by technology and innovation. With a focus on leveraging technology to create a more prosperous and inclusive society, Smart Bangladesh aims to increase efficiency, productivity, and access to services, while also promoting economic growth and reducing poverty. One of the key initiatives of Smart Bangladesh is the Digital Bangladesh program, which aims to provide universal access to digital services and create a more connected and technologically advanced society. Through the development of digital infrastructure and the expansion of digital services, the program seeks to enhance the quality of life for all Bangladeshis. Another key aspect of Smart Bangladesh is the use of technology to improve transparency and reduce corruption. The Access to Information program, for example, promotes transparency and accountability in government by providing citizens with access to information and data. In addition to these initiatives, there are many other examples of technology-driven projects and programs in Bangladesh. These include efforts to improve access to healthcare and education through telemedicine and online learning platforms, and the promotion of entrepreneurship and innovation through the establishment of incubators and accelerators.

While there are certainly challenges associated with the vision of Smart Bangladesh, such as ensuring equitable access to technology and addressing concerns around data privacy and security, the potential benefits are significant. By leveraging technology to create a more prosperous and inclusive society, Bangladesh can position itself as a leader in the region and a driver of economic growth and development. Smart Bangladesh represents an exciting vision for the future of the country, one that is driven by technology and innovation. By investing in digital infrastructure, expanding digital services, and promoting entrepreneurship and innovation, Bangladesh can build a more prosperous and inclusive society that benefits all its citizens.

Questions:

a. What is the goal of Smart Bangladesh?

The goal of Smart Bangladesh is to leverage technology and innovation to create a more prosperous and socially inclusive society, also aims to increase efficiency, productivity, and access to services, while also promoting economic growth and reducing poverty.

b. How can technology help to achieve this goal?

Technology can help to increase efficiency, productivity, and access to services, as well as improve transparency and reduce corruption. By leveraging technology, Smart Bangladesh aims to promote economic growth and reduce poverty.

c. What are some examples of technology-driven initiatives in Bangladesh?

There are many examples of technology-driven initiatives in Bangladesh, including the Digital Bangladesh initiative, which aims to provide universal access to digital services, and the Access to Information program, which promotes transparency and accountability in government.

d. What are the potential benefits of Smart Bangladesh?

The potential benefits of Smart Bangladesh include increased economic growth and productivity, reduced poverty and inequality, improved access to healthcare and education, and a more transparent and accountable government.

e. What are the challenges associated with Smart Bangladesh?

Some of the challenges associated with Smart Bangladesh include ensuring equitable access to technology and services, addressing concerns around data privacy and security, and ensuring that technology is implemented in a way that is respectful of human rights and social justice.

f. How can individuals and organizations contribute to the vision of Smart Bangladesh?

Individuals and organizations can contribute to the vision of Smart Bangladesh by promoting innovation and technology adoption, supporting digital literacy and skills development, and advocating for policies and programs that promote inclusive and sustainable growth. By working together, we can help to build a smarter and more prosperous future for all Bangladeshis.

10. Read the comprehension and answer the question: 5*5=25

The balance of payments (BOP) is a systematic record of all economic transactions, including trade in goods and services, capital movements, and monetary transfers, between a country and the rest of the world during a specific period. The BOP is divided into two main components: the current account and the capital account.

The current account is the component of the BOP that records transactions involving the exchange of goods and services between the domestic economy and the rest of the world. It includes trade in goods, services, and income flows such as interest and dividends. A current account surplus means that the value of exports exceeds the value of imports, indicating that the country is earning more foreign exchange than it is spending. Conversely, a current account deficit indicates that the value of imports exceeds the value of exports, indicating that the country is spending more foreign exchange than it is earning.

The capital account, on the other hand, records capital transactions between the domestic economy and the rest of the world. These transactions include foreign direct investment, portfolio investment, and other forms of investment flows. A capital account surplus means that the value of foreign investment in the country is greater than the value of domestic investment abroad, indicating that the country is attracting more foreign capital than it is investing abroad. A capital account deficit, on the other hand, means that the value of domestic investment abroad is greater than the value of foreign investment in the country, indicating that the country is investing more abroad than it is attracting foreign investment.

A country's overall balance of payments is the sum of its current account and capital account balances. If a country's current account surplus is greater than its capital account deficit, the overall balance of payments is in surplus, indicating

that the country is a net lender to the rest of the world. Conversely, if a country's current account deficit is greater than its capital account surplus, the overall balance of payments is in deficit, indicating that the country is a net borrower from the rest of the world.

Questions & answers:

a) How does a change in exchange rates affect a country's balance of payments?

Answer: A depreciation of a country's currency will tend to improve its balance of payments in the short run, as exports become cheaper and imports become more expensive. Conversely, an appreciation of the currency will tend to worsen the balance of payments in the short run, as exports become more expensive and imports become cheaper.

b) What are the implications of a current account deficit for a country's economy?

Answer: A current account deficit can be a sign of an economy that is consuming more than it is producing. This can lead to a buildup of debt and a decline in the value of the currency, which can ultimately lead to inflation and higher interest rates.

c) How does a country's domestic savings rate affect its balance of payments?

Answer: A higher domestic savings rate means that there is more investment capital available domestically, which can lead to a surplus in the capital account. However, if the savings rate is too high, it can lead to a reduction in consumption and a decline in economic growth, which can ultimately affect the current account balance.

d) How can a country address a persistent current account deficit?

Answer: A country with a persistent current account deficit can take a number of measures to address the issue, such as implementing import tariffs, increasing exports, attracting foreign investment, or reducing domestic consumption.

e) How does a country's trade policy affect its balance of payments?

Answer: A country's trade policy can affect its balance of payments by influencing the volume and composition of imports and exports. Policies that restrict imports, such as tariffs or quotas, can lead to a current account surplus, while policies that promote exports, such as subsidies or export credits, can lead to a current account deficit.

Part-3 [11—15]

11.Read the comprehension and answer the question:

6*5=30

Bangladesh could save as much as \$500 million annually if the cotton waste generated by its garments sector is recycled, according to experts. The country's garment sector currently generates 5.77 lakh tones of textile waste each year. Of this amount, two-thirds are exported. In terms of recycling, Bangladesh's garment sector is facing challenges such as a technology gap, informal value-chain for waste, and lack of policies and incentives. The garment sector needs access to renewable energy and conducive policies and incentives for textile waste recycling to sustain its competitiveness.

In an opening remarks, Swedish Ambassador Alexandra Berg von Linde said that environmental sustainability has long been a clear and overarching priority for Nordic countries and will continue to be key in their relations with Bangladesh going forward. She Also said Nordic businesses have a long of experience in cultivating economic growth while simultaneously decoupling it from negative impacts on the environment by applying solutions that are resource-efficient and by reusing, reducing and recycling. President of the Bangladesh Garment Manufacturers and Exporters Association, said the current trajectory needs to change if the country wants to create a sustainable future, and one of the key strategies to do so is through resource decoupling. "When buyers set their standard, we expect they should give our rewards or at least acceptable prices," he added. He also stressed on increasing renewable energy sources, research and development as well as technological innovations in line with the trade and financial context of the circular economy.

Questions & answers:

a.What do you mean by circular economy in textile?

Sol: Circular economy in textiles refers to an approach to textile production and consumption that aims to minimize waste and maximize the use of resources throughout the entire lifecycle of textiles. The circular economy model seeks to create a closed-loop system where materials are continuously reused and recycled, rather than being discarded as waste. In the context of textile production, circular economy principles can be applied to various stages of the production process, including design, manufacturing, and end-of-life disposal.

b. What are the importance of circular economy of Bangladesh?

sol: By adopting circular economy,

- The textile industry in Bangladesh can reduce its reliance on virgin resources and conserve natural resources such as water, energy, and raw materials.
- This can help to reduce environmental degradation, promote sustainable development, and support the long-term viability of the industry.
- It can help to reduce waste and pollution in the textile industry by encouraging the use of recycled materials, designing products for longevity and reparability, and promoting responsible end-of-life disposal practices.
- It can foster innovation in the textile industry by encouraging new product and service offerings, business models, and partnerships.

c. What are big challenges of circular economy in Bangladesh Context?

sol: Big obstacles are-

- Lack of awareness and education among the general public, businesses, and policymakers.
- Bangladesh lacks the necessary infrastructure to support a circular economy, such as proper waste management systems, recycling facilities, and effective supply chain networks.
- There is a limited level of investment in Bangladesh due to several factors, including a lack of funding opportunities, inadequate policies and regulations, and a general lack of understanding of the benefits of a circular economy.
- Cultural and behavioral barriers can also pose significant challenges to the adoption of a circular economy in Bangladesh.

d. What is current markets of circular economy in Bangladesh?

self—

e. summarize the passage about 50 words?

sol: summarize-

Bangladesh's garment sector could save \$500 million annually by recycling cotton waste, which currently amounts to 5.77 lakh tones each year, with two-thirds being exported. The sector faces challenges such as a technology gap, informal waste value chain, and lack of policies and incentives to support recycling. The Swedish Ambassador emphasized environmental sustainability, and the President of Bangladesh Garment Manufacturers and Exporters Association stressed on resource decoupling, renewable energy, and technological innovations to create a sustainable future.

f. Write down a suitable heading above this passage?

sol: The pertinent title may be **“Challenges and Strategies for Circular Economy in Bangladesh's Garment Sector: Recycling Cotton Waste to Save \$500 Million Annually”**.

12. Read the comprehension and answer the question:

6*5=30

Open banking is a new financial system that is gaining popularity all around the world, including in Bangladesh. It allows customers to securely share their financial data between different financial institutions, such as banks and fin-tech companies, through standardized APIs. Open banking is seen as a way to increase competition, promote innovation, and provide greater transparency and control to consumers. In Bangladesh, several banks have already started piloting open banking services, such as payment initiation and account information sharing, and many more are expected to follow suit. The government has also expressed interest in promoting open banking, as it is seen as a way to promote financial inclusion and digitization in the country. One of the main benefits of open banking is that it allows customers to access a wider range of financial services and products, regardless of which financial institution they bank with. For example, a customer who banks with Bank A could use a third-party app to access services offered by Bank B or a fin-tech company, without having to go through the traditional banking channels. Open banking promotes innovation and competition in the financial industry, which can lead to better services and lower costs for customers. Fintech companies and other third-party providers can use open banking APIs to develop new products and services that can better meet the needs of customers.

However, there are also several challenges associated with implementing open banking in Bangladesh. One of the main concerns is the security and privacy of customer data. Open banking relies on the secure sharing of data between different financial institutions, and there is a risk that sensitive information could be compromised or misused. There is a need for strong security protocols and regulations to ensure that customer data is protected. Another challenge is the need for standardized APIs to ensure interoperability and seamless integration between different financial institutions. Without standardized APIs, it would be difficult for different institutions to work together and for customers to access services from different providers. Finally, there is also a need for education and awareness among consumers and businesses about the benefits and risks of open banking. Many customers may not be aware of how open banking works, or may

not understand the potential risks associated with sharing their financial data with third-party providers.

Questions:

- a) What is open banking and how does it work in Bangladesh?
- b) How does open banking benefit customers and businesses in Bangladesh?
- c) What challenges are associated with implementing open banking in Bangladesh?
- d) What steps can be taken to ensure the security and privacy of customer data in an open banking system?
- e) How can standardized APIs promote interoperability and seamless integration between different financial institutions?
- f) What can be done to educate and raise awareness among consumers and businesses about the benefits and risks of open banking?

Sol:

- a. Open banking is a financial system that allows customers to securely share their financial data between different financial institutions, such as banks and fintech companies, through standardized APIs. In Bangladesh, several banks have started piloting open banking services such as payment initiation and account information sharing, and the government has expressed interest in promoting this new system.
- b. Open banking benefits customers and businesses in Bangladesh by providing access to a wider range of financial services and products regardless of which financial institution they bank with. It also promotes innovation and competition in the financial industry, leading to better services and lower costs for customers. Additionally, it is seen as a way to promote financial inclusion and digitization in the country.
- c. There are several challenges associated with implementing open banking in Bangladesh, such as the security and privacy of customer data. There is a risk that sensitive information could be compromised or misused, and there is a need for strong security protocols and regulations to ensure customer data is protected. Additionally, there is a need for standardized APIs to ensure interoperability and seamless integration between different financial institutions. There is also a need for education and awareness among consumers and businesses about the benefits and risks of open banking.

- d. To ensure the security and privacy of customer data in an open banking system, strong security protocols and regulations must be implemented. This includes the use of encryption, multi-factor authentication, and secure data storage. There must also be regulations in place to ensure that third-party providers handling customer data are trustworthy and have proper security measures in place.
- e. Standardized APIs can promote interoperability and seamless integration between different financial institutions by providing a common language for data sharing. This ensures that different institutions can work together and that customers can access services from different providers. Without standardized APIs, it would be difficult for different institutions to work together and for customers to access services from different providers.
- f. To educate and raise awareness among consumers and businesses about the benefits and risks of open banking, there must be public awareness campaigns, educational resources, and outreach programs. This includes educating customers about their rights and responsibilities when it comes to sharing their financial data, and providing them with resources to make informed decisions.

13. Read the comprehension and answer the question:

6*5=30

Green economic zones (GEZs) are areas of land specifically designated for environmentally sustainable economic growth. In recent years, Bangladesh has made significant progress in establishing such zones to promote sustainable development. One example is the Mongla Economic Zone, which is located in the southwestern part of the country. This zone aims to promote sustainable industrial development and attract foreign investment in green industries and technologies. The government of Bangladesh has taken several measures to support the development of this zone, including providing land, utilities, and infrastructure. Another example is the Bangabandhu Sheikh Mujib Shilpanagar in Mirsarai, which is being developed as a sustainable industrial park. This park is designed to be powered by renewable energy and will feature environmentally friendly infrastructure and waste management systems. The development of this park is expected to create new job opportunities and contribute to the country's economic growth, while minimizing the environmental impact of

industrialization. The establishment of GEZs is part of Bangladesh's broader strategy for sustainable development. The country has made significant progress in recent years in areas such as renewable energy, waste management, and sustainable agriculture. The government has also set ambitious targets for reducing greenhouse gas emissions and increasing the use of renewable energy sources.

However, the establishment of GEZs also raises questions about the role of the private sector in promoting sustainable development, and how to balance economic growth with environmental protection. Additionally, there are concerns about the potential impact of GEZs on local communities, and the need to ensure that marginalized groups are not left behind in the process of economic development. Despite these challenges, the development of GEZs represents an important step towards promoting sustainable economic growth in Bangladesh. By harnessing the power of innovation, collaboration, and investment, Bangladesh is positioning itself as a leader in the transition towards a more sustainable and equitable future.

Questions & answers:

a) What are Green Economic Zones (GEZs), and why are they important for sustainable development in Bangladesh?

Answer: GEZs are areas of land specifically designated for environmentally sustainable economic growth. They are important for sustainable development in Bangladesh because they promote sustainable industrial development and attract foreign investment in green industries and technologies.

b) What measures has the government of Bangladesh taken to support the development of the Mongla Economic Zone?

Answer: The government of Bangladesh has provided land, utilities, and infrastructure to support the development of the Mongla Economic Zone.

c) What is the Bangabandhu Sheikh Mujib Shilpanagar, and how is it being developed?

Answer: The Bangabandhu Sheikh Mujib Shilpanagar is a sustainable industrial park being developed in Mirsarai. It is designed to be powered by renewable energy and will feature environmentally friendly infrastructure and waste management systems.

d) What challenges arise from the establishment of GEZs in Bangladesh?

Answer: Challenges arise from the establishment of GEZs in Bangladesh, such as the role of the private sector in promoting sustainable development and balancing economic growth with environmental protection. Additionally, concerns about the potential impact of GEZs on local communities and the need to ensure marginalized groups are not left behind in the process of economic development.

e) How is Bangladesh positioning itself as a leader in the transition towards a more sustainable and equitable future?

Answer: Bangladesh is positioning itself as a leader in the transition towards a more sustainable and equitable future by setting ambitious targets for reducing greenhouse gas emissions and increasing the use of renewable energy sources. Additionally, by harnessing the power of innovation, collaboration, and investment, Bangladesh is developing GEZs and promoting sustainable economic growth.

f) Precis the passage with suitable title?

-self

14. Read the comprehension and answer the question:

5*4=20

Plastics form an important part of synthetic. plastics are also polymers. Since most plastics can be easily molded into any shape after heating, they are used for making a variety of objects of different shapes and sizes. Plastics are poor conductors of heat which makes them suitable for making handles of cooking vessels, for use in refrigerators, and for making containers in microwave ovens. Plastics are also poor conductors of electricity and that is way they are used as covering materials in electrical appliances, cords and wiring. Plastics are insoluble in water and used for making bottles, buckets and other containers. Most plastics are inflammable. However, they do not corrode or rust and so mostly used in homes and laboratories.

Despite many different uses of plastics, there environmental and health hazards associated with their disposal. This is because plastics are non-biodegradable. Accumulation of plastics is considered a serious problem because most of the methods used to dispose them result in some type of damage to the environment. Though somewhere between 500 million to one trillion plastic bags are consumed worldwide each year, most plastic wastes end up littering roadside and form ugly dumps that harbor many disease causing organisms. Plastics dumped in water

bodies pose a threat to aquatic life; plastics that get buried prevent rain water from seeping into the ground. This affects the growth of plants. When plastics are burnt, they produce toxic gases and smoke.

Questions:

- a) How do the plastics affect the growth of the plants?
- b) What are the hazards associated with the disposal of plastics?
- c) What is produced when plastics are burnt?
- d) What does the word synthetic denote?
- e) What do you learn after reading the passage?

Solution:

- a)** When plastics dump into the environment they generate a layer on the soil surface that avert water from penetrating the soil when rainwater or reservoir water enters it, that's why it hinders the growth of the plant.
- b)** Burnt Plastic produces toxic gases that are very harmful to the environment, pollutes the air causing people to suffer from various diseases. Plastic waste makes the life of aquatic miserable and plastic prevents water from entering the soil which leads hampered to the growth of the plant.
- c)** When plastics are burned, they release toxic gases like dioxins, furans, mercury and polychlorinated biphenyls (better known as BCPs) into the atmosphere, and poses a threat to vegetation, and human and animal health.
- d)** This term refers to a whole which are made artificially by combining two or more components together; this usually involves causing a chemical reaction between two or more compounds, as in the creation of most polymers (a group that includes all plastics and rubbers).
- e)** After reading the passage I learned that plastics are very harmful to biodiversity. So, we need to get rid of plastics and use other alternatives to plastics so that our environment and human life is beautiful.

15. Read the comprehension and answer the question:**5*4=20**

Despite being small in terms of geography, Bangladesh currently ranks 8th in terms of population. Additionally, it is currently experiencing a demographic dividend, with 65.6% of its population being of working age. In order to turn this large population into a valuable resource, Bangladesh must invest in its people, and one essential way to do that is through providing proper education. Bangladesh has made significant strides in increasing access to primary education in recent years. The Annual Primary School Census 2021 reports that nearly 98% of primary-school-aged children are enrolled in school, indicating near-universal access to primary education. Additionally, Bangladesh has achieved gender parity in primary and secondary schools, with 49.5% of girls enrolled in primary and 54.92% in secondary schools. While the progress in primary education is commendable, the trend of students dropping out at secondary and tertiary levels is a significant concern. Additionally, a report by the University Grants Commission indicates that 2.49 lakh university students have dropped out between 2020 and 2021. The lack of attention from the government to revamp the education sector is also concerning. Bangladesh boasts a literacy rate of 74.91%, but a report by UNICEF (2022) shows that only 34% of third graders in the country can read proficiently, and only 18% can do basic math. The prolonged school closures caused by the COVID-19 pandemic have greatly impacted these young learners' foundations. However, it is important to note that the education challenges faced by children in Bangladesh predate the pandemic.

Bangladesh is on the brink of the 4th Industrial Revolution (4IR), which calls for its citizens to possess a diverse set of skills, including digital literacy, ICT knowledge, emotional intelligence, analytical thinking, etc. to be able to compete in the global economy. To fully participate in this revolution, the country must re-evaluate its education system and ensure that it meets the demands of the 4IR. Private universities have played a crucial role in producing graduates with the necessary skills and competencies. However, recent complaints have emerged that these institutions have become mere degree-issuing machines. Graduates are facing difficulty in getting employed and employers are expressing their dissatisfaction with the lack of suitably skilled candidates.

Questions & answers:

a. What do you mean by demographic dividend in context of Bangladesh?

sol: The demographic dividend is the economic growth potential that can result from shifts in a population's age structure, mainly when the share of the working-age population (15 to 64) is larger than the non-working-age share of the population (14 and younger, and 65 and older).

b. What are the Current scenario of education system in Bangladesh?

sol: A report shown by the Annual Primary School Census 2021, almost 98% of children are admitted in school and Bangladesh achieved gender parity in primary and secondary schools, with 49.5% of girls enrolled in primary and 54.92% in secondary schools where 2.49 lakh university students have dropped out between 2020 and 2021, although, the literacy rate of Bangladesh is 74.91%.

c. What is impact of covid-19 in education system in Bangladesh?

sol: The most prime impact of COVID-19 on students is their study and lifestyle. Students won't be able to find the proper method of study. Public and private schools which included an expected rise in dropouts, learning losses, and increase in digital divide.

d. How to maintain Quality of education to cope up with 4IR?

Sol: To keep going a standard of education to meet the future of 4IR in education a diverse set of skills, including digital literacy, ICT knowledge, emotional intelligence, analytical thinking must be ensuring in education development.

e. Write down a suitable heading above this passage?

Sol: The Proper title above this context may be, **Current Education apparatus of Bangladesh: Covid-19 and 4IR.**

Part-4 [16—20]

16. Read the comprehension and answer the question:

5*4=20

Bangladesh's banking sector now requires comprehensive reforms for the financial sector to become strong enough to augment a transition to an upper middle-income country by 2031. The South Asian country also needs to raise foreign currency inflow, develop human capital and expand the private sector's role. Comprehensive and holistic reforms in the banking sector, including an NPL (non-performing loan) resolution mechanism, are necessary. Stronger policies and strengthening governance and regulatory oversight of banks and other financial institutions.

Banking sector needs economic outlook in the evolving global phenomenon for sustainable growth. Bangladesh needs to focus on climate vulnerable communities, identify specific adaptation needs and develop and implement strategies. Challenges remain in infrastructure development, so a national logistics policy and a master plan are urgent needs to realize the full potential of the sector. Human capital index also needs to focus on raising human capital as advantages of low-cost labor and preferential market access may fade with the graduation from the least developed country (LDC) status. The financial sector includes an underdeveloped banking sector with low operational efficiency, weak internal risk management and high NPL levels. Long-term financing and a strong bond market is missing.

With continued external adversities and a spillover effect from the war, only a moderate rebound is expected in FY2024 as high commodity prices and continued monetary tightening persist. Most commodity prices peaked in mid-2022 due to the post-pandemic demand surge and the war before easing since June 2022 due to slowing global growth. To restore macroeconomic stability, Bangladesh Bank attempted to tackle strong pressure of depreciation by gradually allowing it to increase and imposing barriers on the import of luxury and non-essential items. Bangladesh's economy was facing some stress like other countries so it needs proper steps at the right times.

Questions & answers:

a. What do mean by LDCs country?

sol: Least-developed countries are low-income countries that face significant structural challenges to sustainable development and highly vulnerable to economic and environmental shocks and have fewer human assets than other nations.

b. What problem faces by Bangladesh Banking sector now?

sol: Banking sector faces some barriers, these are-

- Non-performing loan collection.
- Foreign reserve decrease.
- High banking rate.
- low quality of assets
- lack of governance
- accountability and transparency
- inadequacy of effective risk management system

c. What measures need to be strengthen this Sector according to passage?

sol: Financial sector requires-

- Economic outlook in the evolving global phenomenon for sustainable growth.
- Focus on climate vulnerable communities, identify specific adaptation development and implement strategies.
- Strong national logistics policy and a master plan.
- Robust human capital index for LDCs status.

d. Write down some initiative that Banking sector taken in present economic situation?

sol: Banking sector endeavored some measures to protect economic slug down such as depreciation of taka to increase export and impose barriers on the import of luxury and non-essential items, also permission to transfer dollar from offshore to local banks etc.

e. Write down a suitable title above this passage?

sol: The concrete title may be **“Financial and Economic sector of Bangladesh: Challenges, reformation.”**

17. Read the comprehension and answer the question:**5*4=20**

Creating affordability is crucial in tapping the unbanked market. No doubt pricing is a tool, but banks also need to be innovating in right- sizing their proposition to convince customers that they can derive big value even from small amounts. One way of doing this is to show the target audience that a bank account is actually a lifestyle enabler, a convenient and safe means to send money to family or make a variety of purchases. Once banks succeed in hooking customers with this value proposition they must sustain their interest by introducing a simple and intuitive user application, ubiquitous access over mobile and other touch points, and adopting a banking mechanism which is not only secure but also reassuring to the customer. Technology is most important element of financial inclusion strategy and an enabler of all others. Of the various selection criteria, cost is perhaps the most important. This certainly does not mean buying the cheapest package, but rather choosing that solution which by scaling transaction to huge volumes reduces per unit operating cost. An optimal mix of these strategies would no doubt offer an innovative means of expansion in the unbanked market.

Questions:

- a) What should be the most suitable title of the passage?
- b) What according to the passage are the benefits one can obtain from a bank account?
- c) What can the banks do to engage the customers permanently once the latter is hooked to the banks?
- d) What should be the determinant factor in choosing technology for financial inclusion?
- e) Explain the strategies suggested in the passage that will offer an innovative means of expansion in the unbanked market?

solution:

- a) The pertinent/incidental title of the passage is “Bank's strategy to capture the unbanked market.”
- b) With having a bank account one can obtain some benefits which making variety of purchases and assisting in better lifestyle include sending money to family in a safe and convenient way, making variety of purchases and assisting in better lifestyle.

c) Once the customers are hooked to the banks, the banks can take some initiatives to engage the customers permanently. These include maintaining interest through introducing a simple and automatic application, providing universal access over mobile and other touch points and adopting secure and confident banking mechanism.

d) Cost should be the determinant factor in choosing technology for financial inclusion. This certainly does not mean purchasing the cheapest package, but rather choosing such a one that can reduce per unit cost by transacting huge volumes.

e) The strategies suggested in the passage that will offer an innovative means of expansion in the unbanked market include convincing and inclusion of customers who are out of banking system, and ensuring access over latest technological devices with reasonable cost.

18. In some parts of Bangladesh, farmers are using their submerged lands for crop production by adopting scientific methods which are similar to hydroponic agriculture practices whereby plants can be grown on the water in a bio-land or floating bed of water hyacinth, algae or other plant residues. Floating gardens (locally known as Dhap) are age-old practice of crop cultivation in the Southern floodplains of Bangladesh. The unique hydroponics production system was developed in the hands of the locals by using their traditional knowledge for agricultural practice and livelihood Bio-diverse vegetables and spices crops are grown sustainably over on floating substrata made mainly of water hyacinth and other minor aquatic weeds on flooded water. The land with the water is used for production of fish in the open water and crops on the floating-beds. Thus, ensures a sustainable utilization of agro-biodiversity, natural resources and multiple use of the land.

Floating agriculture practices have minimal infrastructure and costs can also be kept low because raw materials for the construction of floating beds are readily available from local waterways. This gives the opportunity to many people living in this area to cultivate using this technique. The advantages of floating garden agricultural heritage system are manifold. The floating beds are made of free,

locally abundant materials, especially water hyacinth. This is considered to be one of the most dangerous invasive species due to its high reproduction speed but in this particular farming system, this notorious weed is converted to most useful resources. Since crops could absorb prime nutrients such as nitrogen, potassium and phosphorus from the floating beds and below water, there is collecting water hyacinth, bamboo is laid on a dense layer of water hyacinth to enable people to stand on it, and then more water hyacinth is piled on top to make it compact. The eventual thickness depends on the duration of water-logging, for it must be able to float during that time. To accelerate the process, the previous year's decomposed bed or raft can be used. Because it allows better control over this plant, some researchers have noted the greater productivity of floating bed practices compared with traditional land-based agriculture.

Read the Questions and give the answers:

- a) Describe how the Dhap is considered a type of hydroponic agriculture practice?
- b) What are the economic benefits of floating bed agriculture?
- c) Why is water hyacinth called 'notorious weed'?
- d) How does agro-biodiversity maintain through Dhap?
- e) How does the idea 'woe turns into wealth' resemble with paragraph?

Solution:

- a) Hydroponics farming practice is an ancient practice of crop production where local people use their traditional machinery and agricultural knowledge to develop biodiversity vegetables and crop production systems on floating lands.
- b) Floating bed farming is economically beneficial due to sustainable use of natural resources, multiple uses of land and low cost infrastructure. The materials needed for floating bed cultivation are plentiful and effective locally.
- c) The water hyacinth is called the notorious weed because it reproduces very quickly and occupies the whole place in a very short time.
- d) Agro-biodiversity production system can be maintained through Dhap method. In this way fish can be farmed in water and vegetables and various crops can be farmed in the upper bed.

e) water hyacinth is famous for its fast reproduction system. on the other hand, waterlogging and increases misery among people. However, this notorious weed can be turned into useful weeds by decomposing it for crop cultivation.

19. Read the comprehension and answer the question:

5*4=20

We can never get people to act morally by providing reasons of self-interest, because if they accept what we say and act on the reasons given, they will only be acting self- interestedly, not morally. By refuting this claim, it would be stated that the substance of the action, what is actually done, is more important than the motive. People might give money to help those in extreme poverty because their friends will think better of them if they do, or they might give the same amount because they think it is their duty. Those helped by the gift will benefit to the same extent either way. This is true but crude.

It can be made more sophisticated if it is combined with an appropriate account of the nature and function of ethics. Ethics is a social practice that has evolved among beings living in social groups, and it promotes ways of living that are in the interests of individuals living in groups. Ethical judgments can do this by praising and encouraging actions in accordance with these values.

Questions:

- a) What the ethical argument is stated in this passage?
- b) Follow the idea stated above and formulate the definition of ethics in your own words.
- c) What does the term 'sophisticated' stand for?
- d) What is the role of ethical judgments?
- e) Give a suitable title for the passage.

Solution:

- a) There are some common forms of argument, and one good starting place is to construct an argument that describes relevant liberties and harms, and considers whether resulting harms might warrant restricting liberty.
- b) Ethics is the study of questions of morality, the search to understand what is right, wrong, good, and bad. It is the branch of philosophy that systematically studies moral ideals and goals, motives of choice, and patterns of good and bad conduct.
- c) Someone who is sophisticated is comfortable in social situations and knows about culture, fashion, and other matters that are considered socially important.

d) Ethical judgment is reasoning about the possible actions in the situation and judging which action is most ethical. Ethical judgments can do this by praising and encouraging in its way.

e) "Moral judgments & decision making" - Pertinent title for the passage.

20. Read the comprehension and answer the question:

5*4=20

The need for a bridge over the mighty Padma River may not have been felt so dearly by people other than those who have been born and bred in the southwestern part of Bangladesh. The Padma has been a major stumbling block for the people of the relatively underdeveloped southern region, in terms of communication and trade, as the turbulent river literally isolated the entire region from the rest of the country – including the capital, Dhaka. A bridge across the mighty Padma had been in talks since the mid '90s. The pre-feasibility study of Padma bridge was conducted in 1998-99 while the feasibility study between 2003 and 2005. The government concluded loan agreements with four development partners in early 2011 and an agreement for \$1.2 billion was signed with the World Bank on April 28, 2011. But the billion-dollar project became uncertain in September 2011, when the lead donor, the World Bank, suspended its promised \$1.2 billion loans on an allegation of corruption conspiracy, which was later found to be untrue.

Then, in July 2012, the prime minister took a bold decision to go ahead with implementation of the project with the country's own funds. In December 2015, Sheikh Hasina inaugurated the main construction work of the most challenging engineering project of the country, having one of the deepest foundations in the world. The first span was installed in September 2017. Then the work of installing the other 41 spans and 42 pillars went on one after another. The project has been a huge engineering challenge as the mighty Padma carries a large volume of sediment, making its bed soft and tricky to build on. The major difficult part was the river training and piling because of the strong river currents and erosion. The last span was installed on December 10, 2020, linking the two sides of the mighty river and making the bridge visible. The agonies of crossing the Padma River only by ferries or launches would come to an end. From tomorrow, a new chapter is expected to begin in the lives of the people of the southern region as the bridge will enhance connectivity, facilitate transportation of agro-products, and play a significant role in boosting trade and commerce in the region. The impacts that the 6.15km Padma Bridge is going to have on the communication system and the

economy have widely been discussed with economists, projecting a growth of the GDP by 1.2 percent.

Questions:

- a. Which districts are connected by Padma Bridge and what are its two ends?
- b. When was the foundation stone of Padma Bridge inaugurated and when was it opened for commissioning?
- c. What are the challenges of building Padma Bridge?
- d. What are the economic aspects of the Padma Bridge?
- e. Give a suitable title to the above passage?

Solution:

a. It was connected to Munshiganj, Shariatpur and Madaripur districts also linking the south-west of the country, to northern and eastern regions and two ends are Mawa and Zajira.

b. In December 2015, Sheikh Hasina inaugurated the main construction work of the most challenging engineering project of the country, having one of the deepest foundations in the world. On 26 June, 2022 it was opened for commissioning.

c. The challenges of building Padma Bridge are-

- The project has been a huge engineering challenge as the mighty Padma carries a large volume of sediment, making its bed soft and tricky to build on.
- The major difficult part was the river training and piling because of the strong river currents and erosion.
- Every step of this journey was laced with challenges including fund allocation and encountering rumors.

d. The economic aspects of the Padma Bridge are-

- The bridge will enhance connectivity, facilitate transportation of agro-products, and play a significant role in boosting trade and commerce in the region.
- The economy will widely boost by this bridge and projecting a growth of the GDP by 1.2 percent.
- It will reduce unemployment problem and create a lot of opportunities for destitute people.

e. The title of the passage may vary from person to person, but after reading the passage, it seemed to me that the suitable title for the passage may be **‘Padma Bridge: The new dawn for Bangladesh’s economy’** [or related name].

Phase-5 [21-25]

Power and possession have been the central pursuits of modern civilization. For a long time, they blocked out or distorted other features of the Western Renaissance (revival), which promised so much for humanity. What people have been and are still being taught to prize are money, success, control over the lives of others, and the acquisition of more objects. Modern social, political and economic system, whether capitalist, fascist or communist, reject the basic principle that the free and creative unfoldment of every man, woman and child is the true measure of the worth of any society. Such unfoldment requires understanding and imagination, integrity and compassion, co-operation among people, and harmony between the human species and the rest of nature. Acquisitiveness and the pursuit of power have made the modern man an aggressor against everything that is non-human, an exploiter and oppressor of those who are poor, meek and unorganized, a pathological type that hates and distrusts the world, and suffers from both acute loneliness and false pride.

The need for new renaissance is deeply felt by those sensitive and conscientious men and women who not only perceive the dimensions of the crisis of our age but who also realize that only through conscious and co-operative human effort may this crisis be met, and probably even overcome.

Questions and solution:

a. According to the passage, why has modern man turned out to be the enemy of everything that is non-human?

Solution:

According to the passage, modern man has turned out to be the enemy of everything that is non-human because-

- Non-humans have refused cooperation to human beings.
- Acquisitiveness and eagerness.
- The pursuit of power and possession.

b. Which is one of the requirements for bringing out the best in man?

Solution:

Requirements for bringing out the best in man is free and creative unfoldment of every man, woman and child.

c. Why could not Western Renaissance make total impact on today's humanity?

Solution:

Western Renaissance could not make total impact on today's humanity because capitalist, fascist or communist, reject the basic principle of civilization and Power and possession have been the central pursuits of modern civilization.

d. Which best describes the behavior to the modern man?

Solution:

The word In-human that best describes the behavior to the modern man. The word inhuman includes- lacking qualities of sympathy, pity, warmth, compassion, or the like; cruel; brutal.

e. Which approach does the author advocating to be adopted by the society?

Solution:

The approach that the author advocating to be adopted by the society is conscious and co-operative human effort that may overcome this crisis and met the need of modern people.

22. Read the comprehension and answer the question: 5*4=20

A situation conducive to youth entrepreneurship has long been in place in the country. In the recent time, energetic and enterprising youths' ventures continue to attract the attention of the national-level development experts. The great stir made by the successful young entrepreneurs has prompted the government to take many initiatives supporting their entrepreneurships. They come in the forms of technical education and vocational training imparted to the youths having a knack for entrepreneurship. Breaking with the sluggish enterprise-based activities, the young entrepreneurs are now veritable workaholics. To expedite their production and market the agro- and other products, they have turned in masse to the opportunities online. Due to the irregularities in the supply of electricity and internet connections, many others remain manual and stuck to the conventional offline facilities. These technical drawbacks warrant them to pour in excessive

physical labor and brainwork. So, helping them overcome these obstacles has emerged as an imperative.

The educated youths fanning out to the various types of entrepreneurial sectors is set to benefit both themselves and the nation. The age of youth is one of innovative and fertile ideas. In the inevitable phases of trials and tribulations, the committed and undaunted youths do not fail to taste the otherwise elusive success. The extensively thought-out and pragmatic start-ups hardly end in failures. Thanks to their advantageous position due to their academic back-up, urban youths hardly feel disillusioned. Moreover, finding a situation conducive to their growth instills confidence in them. Be it fish ponds, poultry, dairy farms or orchards of exotic fruits or vegetables, many of these small-scale agricultural activities have made youths stand out with their unique business acumen.

The authorities have made all types of measures to present entrepreneurship as a decent and easy livelihood option before youths. The government has kept arrangements for female entrepreneurs in the special economic zones having entrepreneurial facilities. These words of encouragement will surely serve as a great fillip to the growth of women entrepreneurs.

- a) What initiatives have our government taken to support entrepreneurships?
- b) How do youth entrepreneurs benefit both themselves and the nation?
- c) What is meant by 'elusive success' in second passage?
- d) What causes excessive physical labor and brainwork for the young entrepreneurs?
- e) Give a suitable title to the above passage.

Solution:

a. The Government has taken various steps to support entrepreneurships, such as-

- Established technical and vocational institutions for the youth.
- Arranged different training programme for the entrepreneurs.
- Initiative to grant incentives package for the youth.
- kept arrangements for female entrepreneurs in the special economic zones having entrepreneurial facilities.

b. The youth entrepreneurs are benefited by-

- To create opportunity for themselves.
- To properly utilize the country's assets.
- To create jobs for others.

- To contribute to country's GDP.
- c. The 'elusive success' means someone that is difficult to find, describe, remember, or achieve.
- d. The irregularities in the supply of electricity and internet connections that causes excessive physical labor and brainwork for the young entrepreneurs.
- f. The title of the passage may vary from person to person, but after reading the passage, it seemed to me that the suitable title for the passage may be **"The opportunity of youth entrepreneurship" [or related name]**

The government of Bangladesh has launched the "Green Dhaka" initiative with the vision of transforming the capital city into a sustainable and environmentally friendly metropolis. Recognizing the pressing need to address pollution, preserve green spaces, and promote eco-friendly practices, the initiative aims to create a greener and healthier living environment for the residents of Dhaka.

Under the Green Dhaka initiative, several measures are being implemented. One of the key focuses is on improving waste management systems. The government is investing in modern waste treatment facilities and promoting proper waste segregation and recycling practices to reduce the impact of solid waste on the environment. Another important aspect of the initiative is the promotion of green spaces. The government is working on enhancing existing parks, creating new green spaces, and developing rooftop gardens to increase the city's green cover. This not only improves the aesthetics of Dhaka but also helps mitigate the effects of urban heat island phenomenon and provides spaces for recreation and relaxation.

The initiative also prioritizes sustainable transportation options. The government is investing in the development of pedestrian-friendly infrastructure, dedicated cycling lanes, and a reliable public transportation system. These efforts aim to reduce traffic congestion, air pollution, and carbon emissions associated with motor vehicles. Additionally, the Green Dhaka initiative focuses on stricter regulations to control air and water pollution. Measures are being taken to monitor industrial emissions, enforce vehicle emission standards, and improve water quality in rivers and lakes around the city.

The Green Dhaka initiative aligns with the broader sustainable development goals of the country. By creating a greener and more sustainable capital city, it not only improves the quality of life for Dhaka's residents but also sets an example for

other cities in Bangladesh and beyond. The government's commitment to the Green Dhaka initiative underscores its dedication to building an environmentally conscious and sustainable future for the nation.

Questions and Answers:

- a) What is the main objective of the "Green Dhaka" initiative launched by the government of Bangladesh?

Ans: The main objective of the "Green Dhaka" initiative launched by the government of Bangladesh is to transform the capital city into a sustainable and environmentally friendly metropolis.

- b) What are some key measures being implemented under the Green Dhaka initiative to address environmental challenges in the capital city?

Ans: Some key measures being implemented under the Green Dhaka initiative include improving waste management systems, enhancing green spaces, promoting eco-friendly practices, enforcing stricter regulations to control air and water pollution, and investing in sustainable transportation options.

- c) How does the Green Dhaka initiative aim to promote sustainable transportation options in Dhaka?

Ans: The Green Dhaka initiative aims to promote sustainable transportation options in Dhaka by investing in pedestrian-friendly infrastructure, creating dedicated cycling lanes, and improving the public transportation system. These efforts are intended to reduce traffic congestion, air pollution, and carbon emissions associated with motor vehicles.

- d) What are the potential benefits of creating green spaces and enhancing the city's green cover as part of the Green Dhaka initiative?

Ans: Creating green spaces and enhancing the city's green cover as part of the Green Dhaka initiative can bring several benefits. These include mitigating the effects of the urban heat island phenomenon, improving air quality, providing spaces for recreation and relaxation, enhancing the aesthetics of the city, and contributing to biodiversity conservation. Green spaces also help create a healthier and more livable environment for the residents of Dhaka.

Freelancing in Bangladesh has experienced significant growth and popularity in recent years. With its increasing internet penetration and a young, tech-savvy population, the country has emerged as a thriving hub for online freelancers. This trend has been fueled by various factors, including the availability of affordable high-speed internet, a large pool of skilled professionals, and a competitive cost of living.

Bangladeshi freelancers are active across various platforms, offering services in web development, graphic design, content writing, virtual assistance, and more. They have gained recognition globally for their quality work and competitive pricing.

Freelancing has provided ample opportunities for individuals to work remotely and build successful careers without geographical limitations. It has also played a crucial role in empowering women to enter the workforce, breaking traditional barriers.

The government and various organizations have recognized the potential of freelancing, providing training programs and support to nurture the industry further. As freelancing continues to grow, it contributes significantly to Bangladesh's economy, attracting international clients and fostering innovation and entrepreneurship.

Questions & answers:

a) What factors have contributed to the growth of freelancing in Bangladesh?

Answer: The growth of freelancing in Bangladesh can be attributed to several key factors. Firstly, the increasing internet penetration has enabled freelancers to connect with clients worldwide. Secondly, the country's young and tech-savvy population has led to a large pool of skilled professionals who can offer diverse services. Lastly, the competitive cost of living in Bangladesh allows freelancers to provide quality work at affordable rates, making them attractive to international clients.

b) How has freelancing empowered women in Bangladesh to enter the workforce?

Answer: Freelancing has played a crucial role in empowering women in Bangladesh to join the workforce by providing flexible work opportunities. As freelancers, women can work from home or other convenient locations, overcoming traditional barriers that might hinder their participation in traditional

workplaces. Moreover, freelancing platforms offer a level playing field, where skills and expertise are valued more than gender, leading to greater inclusivity.

c) What support and training programs are available to nurture the freelancing industry in Bangladesh?

Answer: Recognizing the potential of freelancing, the Bangladeshi government and various organizations have introduced support and training programs. These initiatives aim to enhance the skillsets of freelancers and equip them with the necessary tools to succeed in the competitive global market. Additionally, some organizations offer mentorship programs to guide freelancers on building their careers and finding the right clients.

d) How has freelancing impacted the Bangladeshi economy and its international reputation?

Answer: Freelancing has significantly impacted the Bangladeshi economy by generating foreign exchange earnings. As Bangladeshi freelancers attract clients from around the world, they contribute to the country's export earnings. This positive image has attracted more clients and investment opportunities from foreign companies, further fueling the growth of the freelancing industry in Bangladesh.

4*5=20

Dengue fever remains a concerning public health issue in Bangladesh. The country has experienced recurring outbreaks of this mosquito-borne viral disease, particularly during the monsoon season. Bangladesh faces several challenges in controlling dengue, including rapid urbanization, inadequate sanitation infrastructure, and climate change impacts.

The high population density in urban areas creates favorable breeding grounds for the Aedes mosquito, which transmits the dengue virus. Insufficient waste management and stagnant water sources contribute to mosquito proliferation. Additionally, climate change-induced weather patterns, such as increased rainfall and temperature fluctuations, further exacerbate the dengue situation. The impact of dengue outbreaks in Bangladesh is significant. The disease puts immense pressure on the healthcare system, leading to overcrowded hospitals and stretched resources. It affects productivity, disrupts daily life, and imposes a financial burden on affected individuals and families.

Efforts to combat dengue in Bangladesh include public awareness campaigns, strengthening surveillance and early detection systems, and implementing vector control measures. These measures aim to reduce mosquito breeding sites,

promote personal protection measures, and enhance healthcare capacity for timely diagnosis and treatment.

To effectively address the dengue situation, collaboration among government agencies, healthcare providers, communities, and international partners is crucial. By focusing on preventive measures, raising awareness, and improving the overall healthcare infrastructure, Bangladesh aims to mitigate the impact of dengue and protect the well-being of its population.

Questions & answers:

a) What are the main challenges faced by Bangladesh in controlling dengue outbreaks?

Answer: Bangladesh faces several challenges in controlling dengue, including rapid urbanization, inadequate sanitation infrastructure, and the impacts of climate change. High population density in urban areas provides favorable breeding grounds for mosquitoes, while poor waste management and stagnant water sources contribute to their proliferation. Climate change-induced weather patterns, such as increased rainfall and temperature fluctuations, further exacerbate the dengue situation.

b) What are the impacts of dengue outbreaks on Bangladesh?

Answer: Dengue outbreaks in Bangladesh put significant pressure on the healthcare system, leading to overcrowded hospitals and stretched resources. The disease has a negative impact on productivity, disrupts daily life, and imposes a financial burden on affected individuals and families. It not only affects the physical well-being of people but also has broader socio-economic implications.

c) What measures are being taken to combat dengue in Bangladesh?

Answer: In Bangladesh, efforts to combat dengue include public awareness campaigns, strengthening surveillance and early detection systems, and implementing vector control measures. These measures aim to reduce mosquito breeding sites, promote personal protection measures such as using mosquito nets and repellents, and enhance healthcare capacity for timely diagnosis and treatment of dengue cases.

d) What is the importance of collaboration in addressing the dengue situation in Bangladesh?

Answer: Collaboration among government agencies, healthcare providers, communities, and international partners is crucial to effectively address the dengue situation in Bangladesh. By working together, they can coordinate efforts in public awareness, preventive measures, and improving healthcare infrastructure. Collaboration enables the pooling of resources, expertise, and support to mitigate the impact of dengue, protect the population, and foster a sustainable response to dengue outbreaks.
